

June 25, 2009

Hello from sunny Ensenada. I am happy to report that we successfully built our first Version 6 Ariel Home yesterday. The trip was close to being a disaster since our original steel company failed to deliver the required steel for the build. At 9 am Saturday morning, our guys managed to find an alternate source and they worked all weekend to make the 47 panels. It was an incredible effort on their part.

There were some problems with the steel dimensions not being accurate, but we were able to work around that. Here are a few photos from the long, hard day's work:

Trailer arriving at the build site fully loaded.

The concrete pad with new U channel layout. Note the family's current house in the background.

A closer look at Mayra's house. That is their door on the left.
